Continuation of Substance of Interview including description of the general nature of what was discussed: Hybridization conditions in claim 59 part 5 read on low stringency (2X SSC wash), so 112 first para and art rejections maintained. Multiple amino acid substitutions in claim 59 part 3, and claims 65-69, necessitate maintenance of 112 first para and art rejections. Claim 66 requires examination of non-elected sequences 26-27, which are variable consensus sequences. Claim 72 does not recite duration of washing or temperature, so still reads on low stringency. Specification amendments of 06 February contained typographical errors. Examiner to submit content for suggested supplemental amendments to spec and claims, to place application in allowable condition. NO FEE REQUIRED FOR SUBMISSION OF SAID SUPPLEMENTAL AMENDMENT. .
